Re: 519 Rockaway Valley  
Regional Sewerage Authority  
Contract V, Wharton Section

Gentlemen:

We have been advised by Mr. George Goldy of the State of New Jersey Department of Environmental Protection (DEP) Construction Control Group, that excess excavated soil from the interceptor sewer trench on the L. E. Carpenter and Company property in the Borough of Wharton, must be disposed of at a licensed approved landfill site. For background information concerning this matter, we refer you to our letter of February 2, 1979 addressed to the Rockaway Valley Regional Sewerage Authority (RVRSA) with a copy forwarded to Mr. Korcory of your Department. We are enclosing an additional copy of this letter for your information. We are also enclosing a copy of Mr. Goldy's letter dated May 24, 1979 concerning the disposal of the soil in question.

We have contacted Mr. Alan Kaczorski of the Solid Waste Administration, DEP concerning this matter, and he has advised us to submit the enclosed sample analysis to your office and to request the name and location of an approved landfill at which the RVRSA may dispose of the excess spoil material.

We estimate that the chemical waste will be encountered over approximately 350 feet of trench located between sample #4 and sample #7 as shown on the enclosed map. We also estimate that approximately 15 to 20 truck loads or 240 to 320 cubic yards of the excess spoil material will require disposal.

346301

We trust this supplies you with the information you require and would appreciate an early response since we have been required to suspend work in the area until this matter has been resolved.

Very truly yours,

ELSON T. KILLAM ASSOCIATES, INC.

  
James R. Kane
